POSITION-BASED CONDITION ALERT SYSTEM**ABSTRACT**

[0056] An alert system 12 and a method for operating the same including a condition information receiver 28, which receives condition data 14 and generates a condition information signal 30, is provided. The condition alert system 12 also includes a positioning system receiver 27 receiving position data 17 and generating a position signal 29 in response to the position data 17. A system controller 31 is electrically coupled to the condition information receiver 28, the positioning system receiver 27, and an indicator 23. The system controller 31 indicates a condition alert signal via the indicator 23 in response to the condition information signal 30 and the position signal 29.
